

Objective

- We will look at three networks and cut different lines to see the peak power error and peak time error.

Methods

- Plotted the linear and non linear power of a line to calculate the peak power, peak time, and steady state error.
- Formula used for percent error: $\frac{\text{Actual Value} - \text{Expected Value}}{\text{Expected Value}} * 100$

Example of Undefined steady state

Findings

- Peak time error is usually less than 1%.
- Peak power error usually can get in the 1 -5 percent error range.
